Election/Restrictions

Applicant's election with traverse of Group II, Claims 6-10 plus new claim 1, in the reply filed on 10-22-2008 is acknowledged. The traversal is on the ground(s) that the inventions are not distinct. This is not found persuasive because as per the restriction the combination does not require the particulars of the subcombination for patentability because the combination does not recite the particulars of the subcombination.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 6-8 and 11are rejected under 35 U.S.C. 103(a) as being unpatentable over Su(U.S.Pat.5,458,050) in view of Yang(U.S.Pat.6,310,322).

Su discloses a multi-purpose cooker that shows all the features of the claimed invention but fails to show a plurality of judging devices. Yang discloses a heated roller and heated roller assembly that shows a plurality of devices and a circuit for automatically controlling a surface temperature of each roller having a control roller disposed adjacent to the plurality of rollers, wherein the control roller includes a thermistor for detecting the surface temperature

Application/Control Number: 10/590,717

Art Unit: 3742

of the control roller and a thermistor for terminating power to each roller when the surface temperature of the control roller exceeds a predetermined surface temperature, and a comparator responsive to the thermistor for adjusting the power applied to the heating element of each roller.

It would have been obvious to use a plurality of judging devices as taught by Yang with the device of Su so as to control a plurality of rollers.

Claims 9-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Su in view of Yang as applied to claims 6-8 and 11 above, and further in view of Alvarez et al.(U.S.Pat.5,479,707). Su in view of Yang does not show a self heating thermistor used as a water level sensor. Alvarez discloses a method of making an integrally formed modular ice cuber having a stainless steel evaporator and a microcontroller that explicitly shows using a self heating thermistor as a water level sensor. It would have been obvious to one of ordinary skill in the art at the time of the claimed invention to use a self heating thermistor as a water level sensor because the self heating thermistor has a dramatic change in resistance depending on weather it is submerged or nor.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Sham and Robertson are cited to show structure or methods similar to the claimed invention.

Art Unit: 3742

Any inquiry concerning this communication or earlier communications from the examiner should be directed to DANIEL L. ROBINSON whose telephone number is (571)272-4788. The examiner can normally be reached on m-f 5:30-2:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tu B Hoang can be reached on 571-272-4780. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
